

Your Agent Control Center, explained

Specialists find evidence. Master sets priorities. You decide what to execute, defer or reject.

1 Six working areas

Overview is the starting point. Agents manages the team; Proposals holds tasks; Runs shows work; Network replays events; Settings controls automation.

2 Design and language

CLEAR is light; ORBIT is dark. English changes the controls. Saved reports and custom names retain their original language.

3 Open report →

Read the latest saved Master report, its recommendations and evidence.

4 Status counters

Configured shows enabled agents against the total. To review counts open proposals. Active and Waiting show jobs.

5 Review now →

The next-step button adapts to current work. It may instead read View run → or Start briefing →.

6 View all →

Open the complete team or proposal list from the matching side panel.

How to read this guide

Real English-interface captures in CLEAR. Saved content and a few runtime labels retain their original language; values reflect the capture date.

OVERVIEW

Start the day. Keep Master up to date.

The focus list holds up to three tasks. The sync panel shows whether newer results and decisions have been processed.

Today's focus

1 of 2 done

Automatic feedback

With automatic Master updates enabled, synthesis waits for the queue to finish and groups nearby changes.

1 Open →

Open the exact task in today's focus. Tasks completed today remain visible. There can be fewer than three.

2 Start daily briefing

Queue enabled specialists whose reports are due, followed by Master.

3 Run all specialists

Request fresh reports from all enabled specialists, even if their normal cadence is not yet due. Master follows them.

4 Master sync

Current means the tracked inputs were included in the latest successful Master run. The timestamp and pending counters make this visible.

5 View Master report

Open the linked Master run. If synthesis fails, Run Master again offers a retry.

Live UI captured 27 September 2026 · English controls · Report text and counters are snapshots.

02

PROPOSALS

Today's priorities first. Everything else stays reachable.

Each task card explains the topic, rationale, estimated effort, execution mode and decision status.

All · 30Open · 1Approved · 0In progress · 0Later · 3Done · 9Rejected · 171

TODAY'S CHALLENGE

Your three tasks today

✓ TODAYDone

Close the remaining mobile orientation and Hub usability gaps

Orientation and the narrow-screen Creator Hub issue are open in the older 26 September report, while the current-state contract prioritizes mobile orientation and artwork access. A focused review can define a concrete, testable next change without claiming real-device qualification.

Medium effortLocal code work

✓ Completed today

Open task →View outcome5

2 TODAYTo review2

Test crawler access to meaningful page content

The repository serves route metadata through its delivery layer while the app shell starts with an empty root element. Checking rendered representative pages can establish whether crawler-visible content matches the intended page without assuming live indexing results.

Small effortManual

3 Review →4 Skip

6 More tasks

A focus limit, not a quota

Your three tasks today means at most three focus tasks. It does not force three new tasks every day.

1 **Status filters**
All, Open, Approved, In progress, Later, Done and Rejected filter the saved tasks. Counts belong to each status.

2 **Progress and status**
To review needs a decision. Done records completion; today's completions stay in the focus.

3 **Review → / Open task →**
Open the task details. Edit a reviewable task before approving it.

4 **Skip**
Choose Defer for later or Reject, with an optional note. Available on open or approved focus cards.

5 **View outcome**
Open the saved run. A finished run can still contain unresolved questions.

6 **More tasks**
The remaining backlog stays reachable. Use Later to find parked tasks.

Actual English UI captured 27 September 2026 · Existing report text and counters are dated snapshots.

03

REVIEW A PROPOSAL

Make the task clear before you approve it.

Approve records your decision. Starting the work is a separate action.

TASK · TO REVIEW

Review and edit

×

1

Title

Test crawler access to meaningful page content

Why?

The repository serves route metadata through its delivery layer while the app shell starts with an empty root element. Checking rendered representative pages can establish whether crawler-visible content matches the intended page without assuming live indexing results.

Specific task

Inspect representative homepage, Creator, and Space pages in Search Console and record whether rendered headings, descriptions, and links match the repository's expected content. Completion: a dated record for each sampled page and any demonstrated gaps, with fixes proposed only where evidence shows a gap. This is a new candidate from today's report, not a saved proposal ID.

Priority

Soon

Execution

Manual

2

Effort

Small

Confidence

Medium

3

Source: audit/CLEAN-SPACE-URL-SEO-IMPLEMENTATION.md §§7–10, 19; growth report dated 2026-09-27. Search Console access was unavailable to the report.. Approval does not start a run. Manual tasks are tracked here; research and local code work start Codex only after your click.

4

Reject

5

Later

6

Save

7

Approve

1

Title, Why?, Specific task
Title, Why? and Specific task define the goal, rationale and expected result. Make completion assessable.

2

Priority / Execution
Research investigates; Local code work uses a separate working copy; Manual means you perform the work.

3

Effort / Confidence / Source
Effort is an estimate; Confidence describes certainty; Source identifies the origin of the recommendation.

4

Reject
Reject the task and remove it from the focus. The decision is saved.

5

Later
Park the task. It remains accessible through the Later filter.

6

Save
Save edits while keeping the current decision status.

7

Approve
Set the task to Approved. Execute or Start manual task then becomes available.

Actual review dialog, combining two scroll positions. No task change; Close (x) exits without submitting edits.

04

AFTER APPROVAL

Three execution modes. Three clear paths.

The available controls depend on the task's execution mode and current status.

RESEARCH

The agent investigates.

Execute

Start the approved research task. It runs with read-only access.

View run

Follow the queue, current step and eventual result.

View outcome

Read the findings, sources and remaining limitations.

LOCAL CODE WORK

The agent edits code.

Execute

Confirm the extra prompt. The job starts in its own Codex worktree.

View run

Inspect progress and the outcome of the separate working copy.

Copy path

Copy the worktree path from run details once available, then review the changes.

MANUAL

You perform the work.

Start manual task

Set the task to In progress. The click does not carry out external work.

Record outcome

Enter what was actually completed and any supporting evidence.

Mark done

Save the outcome and record today's completion. A note of 5-2000 characters is required.

What does Done mean?

Automatic tasks are marked done after a technically successful run. This is not independent acceptance of the work. Review code and intentionally integrate it; merge and deployment are separate actions.

Manual task not finished after all?

Return to approved moves a started manual task out of In progress without marking it complete.

SKIP

Not right for today? Tell Master why.

Open Skip on a daily focus card, choose a decision and add an optional explanation.

SKIP TODAY'S TASK

×

Test crawler access to meaningful page content

The task leaves today's focus. Master receives your decision at the next sync.

Note to Master (optional)

Why isn't this task right now?

2

Defer for later

3

Reject

- 1

Note to Master (optional)
Explain "Relevant after the pilot" or "Handled elsewhere." Your note is saved with the decision.
- 2

Defer for later
Defer for later removes the task from today's focus and keeps it under Later. Another suitable task may move into the free slot.
- 3

Reject
Decline the task. Master receives the decision at the next sync and is instructed to respect it in future recommendations.

Bring a task back

Proposals → Later or Rejected → Open task → Approve → start separately.

Opening or approving it does not start work. Running work must first be cancelled, or a manual task returned to approved.

AGENTS

Seven roles, with an editable brief for each.

Start queues a single agent. Configure opens its profile. + Specialist opens a new profile form.

Ready

Quality & Risks

Tracks mobile quality, accessibility and pilot limits.

Task and rules

Inspect LIEUVA's current repository and audit/CURRENT-STATE.md for concrete open quality and launch risks. Focus on mobile interaction, artwork access, reduced motion, publishing, permissions, and missing real-device checks. Mention only new or still-relevant issues and link to exact repository paths. Make no changes, run no tests, and take no live actions. Respond in English.

Write prompts in English. The agent also reads the relevant AGENTS.md files.

Remove agent

6

Save profile

1

Configure

Open the profile below the cards. Name and Short description identify the role.

2

Model / Reasoning

Model / Reasoning selects the model and effort for future runs.

3

Cadence / Web search

Daily, Weekly or Manual; live, cached or disabled web search. Master keeps a daily cadence.

4

Agent enabled

Control whether the profile can be used. Disabled agents cannot be started from their card.

5

Task and rules

Task and rules contains the English brief. Agents are instructed to read relevant project rules.

6

Save profile

Save changes for future runs. Existing running jobs keep their started instructions.

Real profile shown from two scroll positions. Close exits; Remove agent confirms profile removal, keeping saved reports.

07

RUNS

Follow progress. Read what actually happened.

Runs keeps jobs in time order. Details opens the selected run beneath the list.

Recommendations

Test crawler access to meaningful page content · Soon

Inspect representative homepage, Creator, and Space pages in Search Console and record whether rendered headings, descriptions, and links match the repository's expected content. Completion: a dated record for each sampled page and any demonstrated gaps, with fixes proposed only where evidence shows a gap. This is a new candidate from today's report, not a saved proposal ID.

audit/CLEAN-SPACE-URL-SEO-IMPLEMENTATION.md §§7–10, 19; growth report dated 2026-09-27. Search Console access was unavailable to the report.

Open task →

- 1

Details

Open status, timestamps, current step, report and log. The page scrolls to the detail section.
- 2

Time and latest activity

Start / Last activity shows when work started and the latest output. Token usage appears when available.
- 3

Read status carefully

Queued waits its turn; Running means an active process; Completed means technically successful. Review Failed or Cancelled results. One job runs at a time.
- 4

Open task →

A linked Master recommendation opens the saved task for review, approval and a separate start.

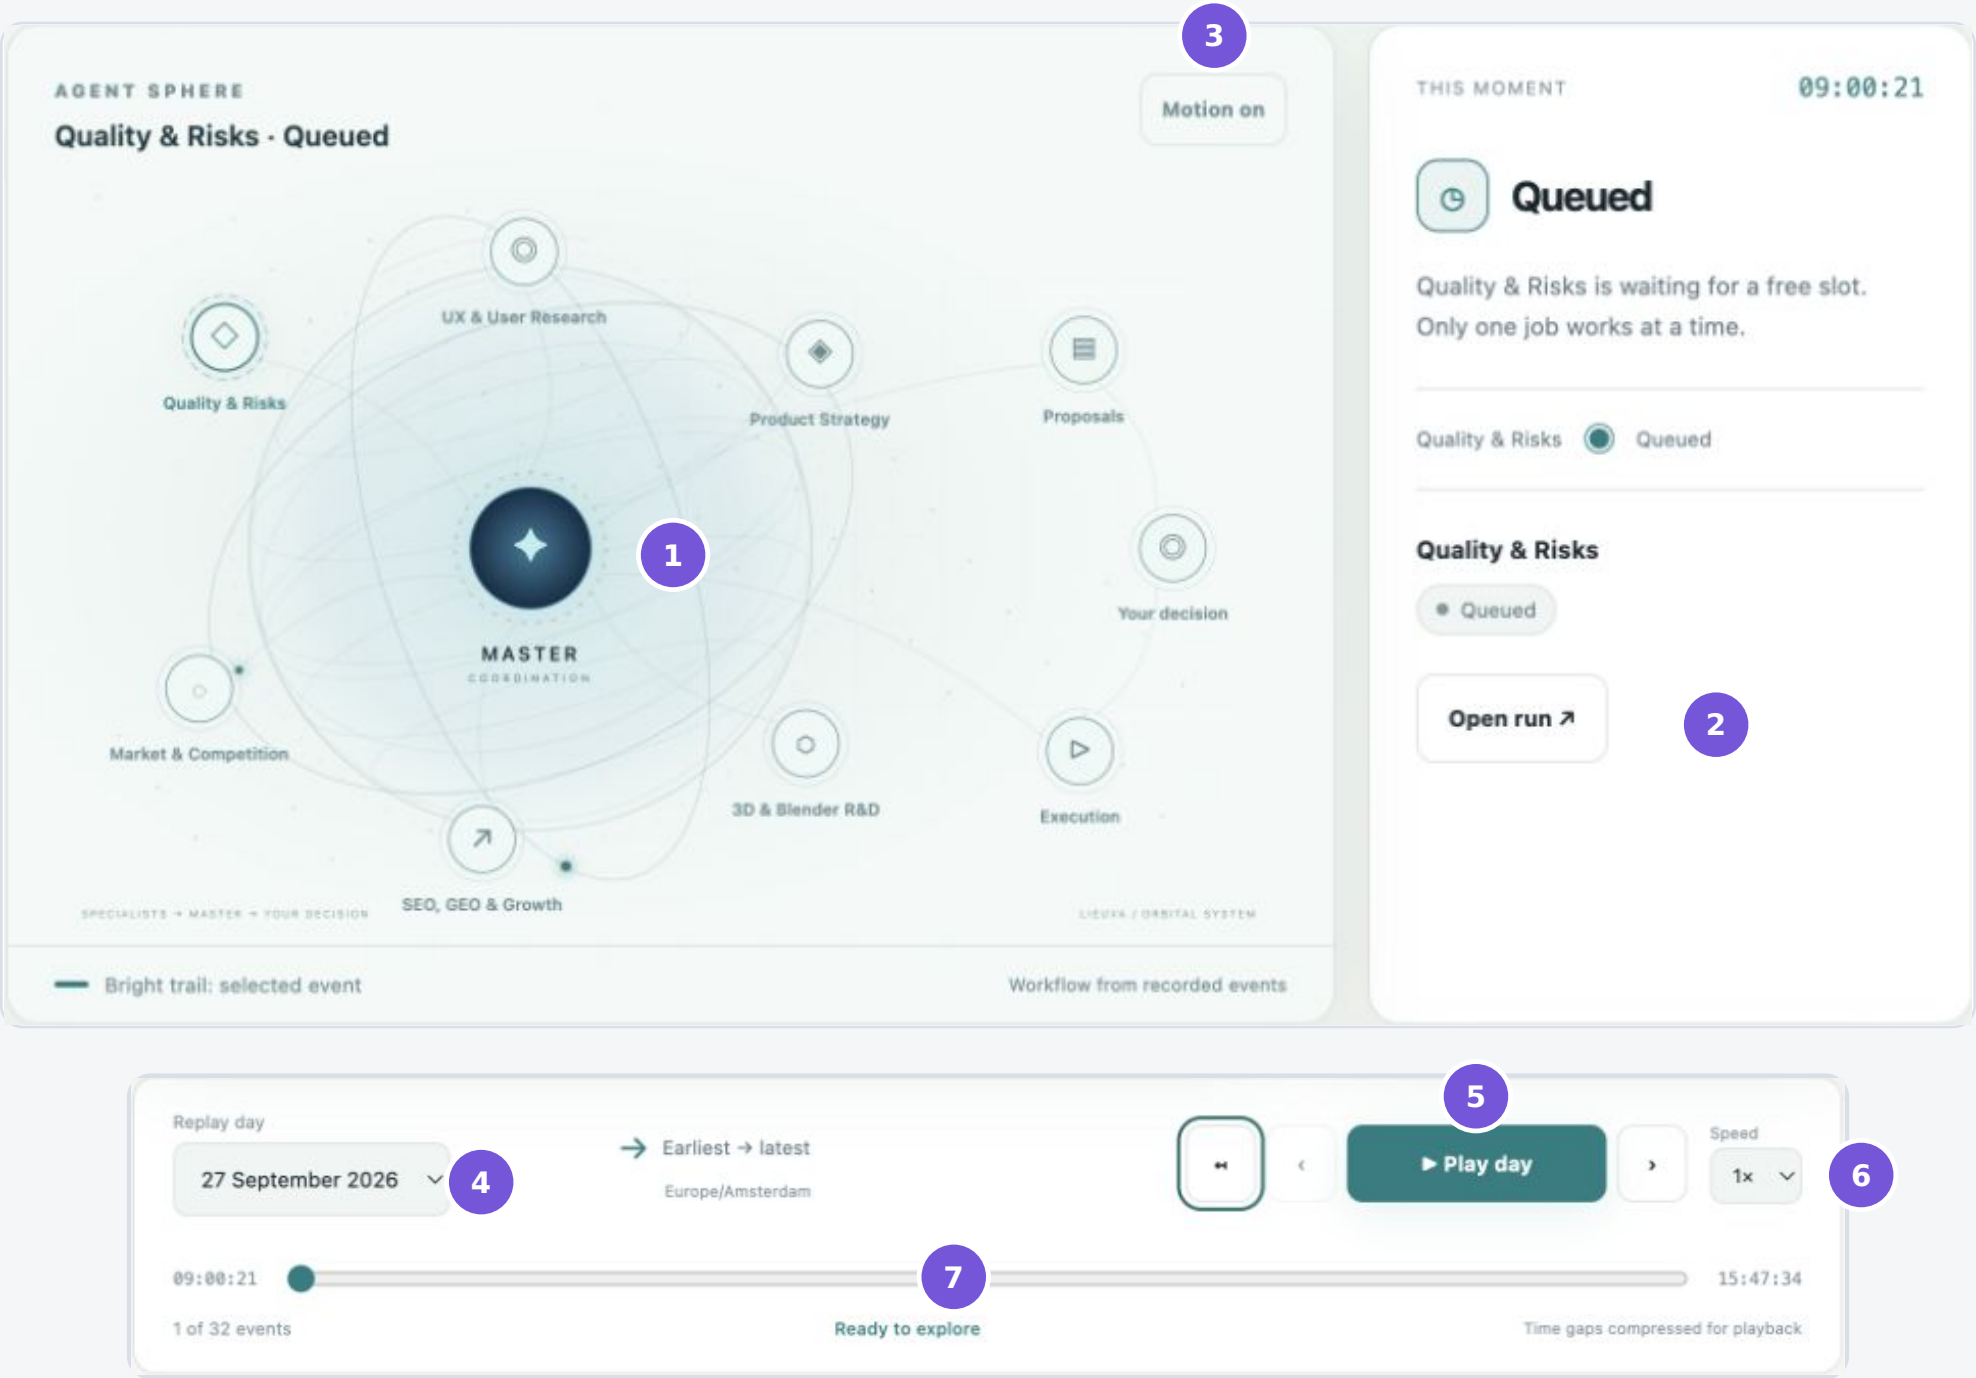

Other conditional actions

Full log opens the protocol. Cancel is available for queued or running jobs. Copy path appears when a worktree path is known.

NETWORK

Replay the day as a sequence of handoffs.

See how specialist findings, Master recommendations, your decisions and results connect.

- 1 Sphere and bright trail**
Master sits at the center. The bright connection identifies the selected recorded event.
- 2 Open run / Open task**
Open run / Open task opens the saved item. Proposal text can show its latest stored version, not a complete past snapshot.
- 3 Motion on / Motion off**
Toggle decorative motion. The label shows its current state; reduced-motion preferences are respected.
- 4 Choose day**
Select a recorded day from the date menu.
- 5 Play day / Pause**
Play day starts playback. Pause stops it. At the end, Replay again restarts the available day.
- 6 Arrows and Speed**
Restart, move one event back or forward, and choose 1x, 2x or 4x.
- 7 Timeline and event list**
Jump to a moment with the slider or click an event below.

Playback does not start or stop real agents. The retained timeline is not a complete edit history.

SETTINGS

Choose when the daily cycle runs.

Automation depends on the local computer and server being available. It is not a cloud schedule.

Daily briefing

1

☒

Start automatically each day

2

☒

Update Master automatically after new results

Warn after minutes without output

10

3

A quiet process may still be working. The warning does not cancel it.

Time

09:00 AM

4

Timezone

Europe/Amsterdam

5

IANA timezone, e.g. Europe/Amsterdam.

After startup, the server catches up today's run if the scheduled time has passed. Weekly agents run only when their latest report is at least seven days old.

Save schedule

6

Local execution

Codex CLI

/Applications/ChatGPT.app/Contents/Resources/codex

How it works

Research is read-only. Approved code work starts in its own Codex worktree. Logs and reports are in artifacts/agent-console/.

Active run

None - 0 queued

Latest daily briefing

Sep 27, 2026, 3:47 PM

- 1

Start automatically each day
Enable the daily briefing at the chosen local time.
- 2

Update Master automatically
Process new outcomes and decisions after the queue finishes.
- 3

Warn after minutes without output
Set the quiet-process warning threshold. Silence need not mean the agent has stopped.
- 4

Time
Choose when the automatic daily run becomes due.
- 5

Timezone
Use an IANA timezone such as Europe/Amsterdam. It defines the clock and daily boundaries.
- 6

Save schedule
Apply all form changes, including the checkboxes. Changing a checkbox alone does not save it.

Starting the server later

An unstarted daily run is caught up that day. Weekly specialists become due when the last successful report is at least seven days old.

THE COMPLETE WORKFLOW

One day, six simple steps.

A loop that keeps recommendations, decisions and outcomes connected.

1 Get your bearings

Read Overview, Master's summary, its timestamp and today's focus. Start a daily briefing when needed.

2 Understand the proposal

Open Review → or a linked recommendation. Check the goal, rationale, evidence and execution mode.

3 Make a decision

Edit and Approve. If the task is wrong for today, Skip it, defer or reject it, and explain why.

4 Start deliberately

Click Execute for agent work, or Start manual task and perform the work yourself.

5 Check the outcome

Read the run result. For manual work, record evidence and Mark done. Review code in its separate worktree.

6 Close the loop

Check Master sync. With automation enabled, Master incorporates new outcomes and decisions into its next assessment.

Specialists → Master → your decision → execution → outcome → Master

Watch the introduction

A playful animated companion explains the roles and the feedback loop. Keep the video in the adjacent video folder when sharing this PDF.
